Mrs. Rajshri Chandrabhan Thete

GAS BOOKING SYSTEM

The Gas Booking System is a web-based application designed to streamline the process of booking gas cylinders and managing deliveries. It aims to provide a convenient and efficient platform for customers to order gas cylinders online, track their bookings, make payments, and receive timely delivery. The system is developed using a combination of HTML**,** CSS**,** Bootstrap**,** Hibernate**,** MySQL**,** and Java to ensure a responsive, user-friendly experience with a robust back-end infrastructure.

Entities:

- Admin
- Gas
- Customers
- Booking
- Payments
- Delivery

VARIOUS ENTITIES:

1. Admin

- Admin_id(primary key)
- Admin_name
- Admin_password

2. Gas

- gas_id(Primary Key)
- gas_name
- gas_price

3. Customers

- customer_id(Primary key)
- customer_name
- customer_mobile
- customer_email
- customer_address
- password

4. Bookings

- booking_id(Primary Key)
- gas_id(fk)
- customer_id(fk)
- booking_date

5. Payments

- payment_id(Primary Key)
- customer_id(fk)
- payment_date
- payment_amount

6. Delivery

- delivery_id(Primary Key)
- customer_id(fk)
- delivery_address
- delivery_date

CONCLUSION:

The Gas Booking System effectively addresses customer challenges by providing a seamless platform for booking gas cylinders, making payments, and tracking deliveries. With the integration of HTML**,** CSS**,** Bootstrap**,** Java**,** Hibernate, and MySQL, the system offers a scalable and user-friendly experience. Administrators have full control over gas inventory, bookings, and payments, while customers benefit from a streamlined process. Future expansions, such as automated alerts and real-time tracking, can further enhance the system's functionality. Overall, the project highlights the power of modern web technologies in simplifying everyday services like gas cylinder delivery.
